

Francine Stephens

Data Scientist | Experimentation & Product Insights

Denver, CO | (210) 885-0604 | Francine.Isabel.Stephens@gmail.com | [linkedin.com/in/francine-stephens](https://www.linkedin.com/in/francine-stephens)

Technical Impact Highlights

- **Designed scalable ML, LLM, and geospatial models** to forecast operational needs, evaluate AI workflows, and extract qualitative and spatial insights—improving product decision-making..
- **Built automated, reusable analysis pipelines** in Python/R that reduced manual processing time, improved reliability of experimentation reporting, and enabled scalable behavioral insights across product teams.
- **Translated statistical and spatial analyses into compelling narratives** for executives and cross-functional stakeholders, driving roadmap decisions, experimentation strategy, and investment prioritization.

Skills

- **Statistical Methods:** Causal Inference | A/B Testing | Regression | Clustering | Geospatial Modeling
- **Programming & Data Tools:** R | Python | SQL (BigQuery, MySQL)
- **Specialties:** Scalable Metrics | Experimentation | UX Analytics | Data Storytelling | Geospatial Analysis

Work Experience

Data Scientist (Contract to FTE) | Workday | April 2025 - Present

- Owned the analytics strategy for the pre-production experimentation program, partnering with PMs, Design, and Engineering to evaluate new features and AI workflows across all product areas.
- Built and standardized experimentation frameworks and scalable metrics, enabling consistent, interpretable analysis and increasing pre-production experiment throughput from 5 to 30 per quarter.
- Developed predictive models that quantified flex credit demand across user segments, informing entitlement policy and powering a customer-facing estimation tool used in product planning.

Senior Data Science Analyst | Carmel Partners | April 2024 - April 2025

- Conducted geospatial analysis of neighborhood attributes, transit access, and competitive supply across 7 markets to refine location-based ranking prioritization, contributing to 4 acquisitions.
- Partnered with marketing to analyze customer demographics and behavioral patterns, producing monthly targeting and relevance reports that increased digital ad engagement by 4%.
- Analyzed bi-annual customer surveys (50K+ records) to surface customer preferences, segment differences, and satisfaction drivers, informing targeting strategy and operational decision-making.

Quantitative User Experience Researcher (Contract) | Mozilla | October 2023 - March 2024

- Designed and analyzed A/B tests to evaluate Firefox's tab organization, improving usability ratings by 30%.
- Synthesized 150M+ records of in-browser feedback and clickstream data using Python and SQL to uncover drivers of satisfaction and intent signals that informed relevance and ranking improvements.
- Analyzed browser usage rates and demographics of 200M+ monthly active users, building dashboards that visualized search pathways, churn points, and discovery behavior across segments.

Research Scientist (Intern to Contract) | Intuit | June 2021 - April 2022

- Developed statistical models to forecast 3 years of hiring targets, leveraging SQL aggregation of HR data.
- Automated weekly employee survey analysis in Python and delivered satisfaction, engagement, and NPS insights to C-suite executives in dashboard reports.

Spatial Data Analyst | Texas Democratic Party | August 2020 - December 2020

- Built GIS-based voter turnout and precinct-level forecasting models to optimize resource allocation.
- Conducted spatial clustering to identify high-impact precincts and modeled geo-demographic turnout predictors.
- Produced geospatial dashboards used by organizing teams to prioritize outreach and improve efficiency.

Education

Ph.D. in Sociology, Computational Sociology | Stanford University | September 2017 - January 2024

B.A. in Sociology, Quantitative Methods | University of Pennsylvania | August 2013 - May 2017
